SUMMARY

Builds the systems that run a business and edits the videos that sell it: client portals, scorecards, KPI dashboards, onboarding and reporting automation and approval-first AI agents for agencies and growing brands, plus VSLs, short-form ads and testimonials with on-brand motion graphics. Grew from Junior Frontend Developer to Lead Frontend Developer to Product Owner at Alphaus, a cloud cost SaaS company, then built startup MVPs with founders at Ardexa.ai. Automation is built around real business decisions, with validation, approval steps, logging and human oversight.

Open to client projects and full-time or contract roles in operations, automation, product and frontend.

EXPERIENCE

Ops & Automation Assistant, Penguin Ops · Remote — Aug 2026 – Present

The agency's automation specialist in practice, covering the technical side (architecture, builds, hosting, the automations) and the operational side (auditing how each client team works, removing manual steps, parallel checks before each switch, handover guides and support).

- Client portal and KPI dashboard for a talent management agency: one-tap client decisions written straight back to the team's Google Sheets; live on its own domain since 2 October 2026.
- Weekly scorecard for a performance ad agency: repaired the old scanner, restored 130 lost verdicts and rebuilt it from source data; 93% parity with the old sheet, cutover in October 2026.
- Client operations for a Google Ads agency serving nearly 80 e-commerce clients: 14 n8n workflows, from a 38-node onboarding run by one form to a weekly Claude review of each client.

Tools: Next.js, Supabase, Postgres, Google Cloud Run, n8n, ClickUp, Slack, Asana, Google Sheets, Typeform, PandaDoc, Meta and Google Ads APIs, Claude

Systems Implementation Associate, Stakra · Remote — Jun 2026 – Present

Automation and full-stack work for an operations consultancy serving small and growing businesses: client apps, governed automation systems, monitoring, and the technical side of Stakra's own service packages.

- MBOS, a governed AI media-buying system that cannot spend money on its own (9,998 pipeline tests passing in simulation), and Watchtower monitoring for every automation, agent and webhook.
- Salon OS, a white-label operations app for small salons (point of sale, commissions, payroll, inventory), delivered as a complete first version with 32 automated tests.
- Car pre-vetting tool (capstone for a used-car dealer): Apify listings, a deterministic pricing engine for maximum offer prices, Supabase Auth and RBAC, daily reports and human approval before WhatsApp outreach, with paid PPSR search costs weighed; 72 unit tests and 12 of 12 live end-to-end checks passing.
- A Typeform to n8n to Notion lead diagnostic that keeps partial responses; a review of Stakra's service packages and data-safety standards; a Twilio evaluation for WhatsApp Business.

Tools: Next.js, TypeScript, Supabase, Prisma, PostgreSQL, n8n, Airtable, Shopify, Notion, Typeform, Apify, GitHub Actions, Vercel, Render, Playwright

Automation & Web Developer, Three-brand haircare retail group · Client engagement — Oct 2026 – Present

The group runs online retail, a salon brand and a wholesale business. It had a CEO dashboard and 47 n8n workflows, but no shared view of what to do next.

- Audited the existing system (369 commits, the Cloudflare setup, 47 n8n workflows), wrote the go-live proposal, rebuilt the CEO dashboard and put the n8n ingestion behind one validated endpoint.
- 4 of 16 agents running in testing, every recommendation routed through an approval queue; writes the guides the team uses to run and extend the system.

Tools: n8n, React, Vite, Cloudflare Workers, Cloudflare D1, Monday.com, Shopify, Omnisend, Meta Ads

Video Editor & Motion Graphic Designer, Clipt · Client engagement — Oct 2026 – Present

Clipt is a mobile foot-care training company. In practice its fractional video production lead: designed how its videos get made, from raw founder footage to delivery, and edits each piece.

- Streamlined the video workflow from footage intake to delivery and set up the brand system: brand rules, reusable motion graphics, an animated logo intro and a checklist for every format.
- Delivered the 35-minute VSL in 4K with a 68-second highlights reel, four vertical ads and two nurse testimonials, with approved edits turned into a repeatable recipe for new pieces.

Tools: VSL editing, motion graphics, colour grading, sound design, CapCut

Web Designer and Developer, Flexiwork · Remote — Mar 2026 – Oct 2026

- WordPress, Elementor, Wix and custom HTML and Tailwind builds: Figma files or references turned into responsive landing, funnel and service pages with Stripe, forms, analytics and tracking.
- More than 20 client websites, working directly with non-technical clients under short delivery windows; recognised for consistent early delivery, once shipping a full site in under an hour.

Lead Frontend Developer / Product Builder, Ardexa.ai · Remote — Oct 2025 – May 2026

Primary frontend and full-stack developer in a team of four (two founders, one backend developer), building MVPs from the ground up: architecture, product flows, UI/UX direction, business-rule translation, API integration, backend logic where needed, and Vercel deployment. Products: RentWise, LexaDraft and TicketDesk (case studies below).

Stack: Next.js, TypeScript, Tailwind CSS, shadcn/ui, DaisyUI, Supabase, Vercel

Automation Engineer, Clix · Freelance, remote (company based in Israel) — Dec 2025 – Mar 2026

- End-to-end n8n workflows for data processing, reporting and task automation, integrating APIs and webhooks, with AI analysis into structured outputs, validation, logging and error handling.

Junior Frontend Developer → Lead Frontend Developer → Product Owner, Alphaus — Jul 2023 – Dec 2025

Remote role at a cloud cost SaaS company. Junior Frontend Developer (Jul 2023 – Oct 2024), Lead Frontend Developer (Oct 2024 – Aug 2025), Product Owner (Aug 2025 – Dec 2025), across Octo, Ripple, Flow, Wave, Wave Pro, internal customer-success tools and internal automation.

- Octo (Lead Frontend Developer): frontend architecture, PR reviews, Cypress tests and weekly release coordination in Vue, TypeScript, Vuetify, ECharts and GridStack; Figma to production.
- Standardised PR templates, mentored engineers learning Vue, and built a Slack to ClickUp bug-reporting automation (Make, then n8n) adopted company-wide and recognised by the CEO.
- Ripple (Product Owner): sprints, backlog and requirements, Figma UI/UX when design capacity was short, the V2 microfrontend migration and the Archera partnership; FinOps Certified Practitioner.

Freelance and client websites — 2023 – Present

- **Pacific West Diagnostic Imaging** (pwmri.com): patient-facing Wix site with Stripe payments.
- **CzechVibes** (czechvibes.com): multilingual HTML and Tailwind frontend for a European travel brand.
- **WordPress:** GetEmLeads, Moberly Consulting, Pickle N Par, Strat-E Marketing, aprilmeigrace.online.

SELECTED CASE STUDIES

Titles link to the full write-ups on the portfolio; operations clients stay anonymous.

OPERATIONS SYSTEMS & AUTOMATION

> **Client portal and KPI dashboard for a talent management agency** · Penguin Ops · Live since 2 October 2026
>
> **Problem:** client approvals for creators, rates, concepts and drafts arrived over email and chat, and the team re-keyed every answer into its Google Sheets. **Built:** one-tap decisions with a 10-minute Undo, PandaDoc status with signed-PDF download, live YouTube performance, Slack reminders and a Monday digest, a "View as client" mode, an audit log with Retry, row-level security per client, and a read-only KPI dashboard.

> **Weekly scorecard for a performance ad agency** · Penguin Ops · Sole builder · Cutover October 2026
>
> **Problem:** the scorecard behind the team's weekly targets was partly hand-typed, and its scanner had quietly stopped recording verdicts. **Built:** Postgres fed by Asana webhooks, campaign vaults and Meta spend; a metric engine of tested pure functions; a Control Panel, Data health page and Monday Slack digest on the

agency's own Google Cloud. **Result:** 328 of 351 weekly values match the old sheet (93%), all 23 differences trace to known V1 behaviour, and derived events agree on all 12,785 events both systems hold.

Client operations for a Google Ads agency serving nearly 80 e-commerce clients · Penguin Ops
Problem: every new client meant the same long checklist across Typeform, ClickUp and Slack. **Built:** the 38-node onboarding (ClickUp client, store and tasks, internal and external Slack channels, Slack Connect invite, pinned welcome), buyer assignment, a Monday pulse where Claude reviews each client's channels, and Google Ads spend, ROAS and fee tracking converted to EUR at ECB rates. **Result:** onboarding is one form submission, and all 14 workflows are generated from Python so they can be rebuilt and versioned.

Business OS for a three-brand haircare retail group · Client engagement · In testing
Built: a closed loop where specialist agents analyse only their own area, recommendations enter an approval queue by risk and spend, approved work becomes Monday.com tasks and results are compared with the original recommendation; agents run only when switched on and when their data is less than 45 days old, otherwise they wait instead of guessing. **Result:** 4 of 16 agents running on the test site; the troubleshooting agent completed 164 of 165 runs cleanly and the daily briefing 21 of 21.

MBOS governed AI media buying, and Watchtower monitoring · Stakra · Simulated, not live
Built: spend off until switched on, campaigns created paused and two people to release money; the template repository each brand instance is created from (kill switch, Google and Meta signal readers, media-buyer agent, Airtable ledger); 79 contracts defining what each part may and may not do; and Watchtower, a read-only dashboard showing whether every automation, agent and webhook is alive. **Result:** 9,998 pipeline tests pass with no failures in simulation; Watchtower v1 complete (all 17 planned chunks, 19 connections).

VIDEO EDITING

Clipt: sales video (VSL) · Video Editor & Motion Graphic Designer
Built: cleaned the raw takes (retakes, fillers and mouth clicks removed, pauses tightened, repeated lines tracked across the script); frosted panels in Clipt's brand style timed to the founder's speech, with framing that follows them; full-screen statements, title cards, a coverage map of the United States and Canada, an animated logo, a cold open and words behind the speaker; colour graded per location, with UI sound effects under the voice. **Result:** the complete 35-minute VSL in 4K, plus a 68-second highlights reel.

Clipt: short-form ads and nurse testimonials · Video Editor & Motion Graphic Designer
Built: four vertical ads (mostly around 15 seconds), each quoted line found in the 4K originals and reframed to 9:16 on the face, with the hook on screen from the first frame and half-second eased zooms on stressed words; two nurse testimonials with a branded card timed to their words, the Clipt Verified badge and each name with its credential; colour and loudness matched to the VSL, captions left off the master for per-platform styling. **Result:** delivered at 2K (1440 × 2560) from one repeatable brand recipe.

PRODUCT & FRONTEND

Alphaus: Octo and Ripple · Lead Frontend Developer, then Product Owner
Octo: the dashboard and cost report builder (GridStack layouts, ECharts widgets, currency conversion, export), recommendations UI and history, and alert and channel management across Slack, Microsoft Teams and email, so cost teams build their own reports without engineering support.
Ripple: at the CEO's request, evaluated the Archera partnership, mapping its Reserved Instance and Savings Plan optimisation against Ripple's invoicing and cost visibility workflows; it became an active strategic initiative, taking the product story from visibility to visibility plus optimisation.

Ardexa.ai MVPs: RentWise, LexaDraft and TicketDesk · Built with the two founders
RentWise: renter onboarding (income, household, guarantors, pets, vehicles), hard-requirement filtering, fit scoring and background checks, turning a listing platform into a qualification engine.
LexaDraft: a template builder with named variable fields, generate-from-template, PDF and Word export and email delivery, built from a construction business's pain of rewriting near-identical contracts.
TicketDesk (ticket-desk.ardexa.ai): frontend architecture, reusable issue-management UI and triage dashboards for tickets from several applications.

AUTOMATION & AI PROJECTS

- **AI job-matching pipeline:** self-hosted n8n that scrapes and deduplicates listings, filters by keywords so rules run before AI to keep LLM cost down, scores fit with OpenAI (only 75 or more passes) and emails HTML digests with direct links.
- **AutoFit weekly coaching system:** immutable weekly client snapshots, LLM-drafted summaries and messages, and coach review (approve, reject, note or regenerate). Nothing is sent without explicit approval.
- **Slack to ClickUp bug reporting:** Make, then n8n; structured, routed tasks, adopted company-wide.
- **Zoom to YouTube pipeline:** recordings pulled via API, tracked in Google Sheets, uploaded to YouTube.
- **RAG assistants:** a Telegram bot over uploaded files (OpenAI embeddings, Supabase vectors), a CV RAG in n8n and Pinecone, and the portfolio chatbot (October 2026) with per-visitor memory and rate limiting.
- **Also:** a Reddit scraper that turns posts into structured ideas; ManyChat and WhatsApp automations improved; Zapier and Make workflows migrated to n8n.

PERSONAL PROJECTS

- **Bouquet Cipher** (bouquet-cipher.vercel.app): messages written as hand-drawn bouquets (every word a stem, vowels flowers, consonants leaves), shared by link or QR gift tag and read back as each flower lights up; camera, image or typed-code decoding; unit, property-based and end-to-end tests. Next.js, Supabase.
- **Arnis Scoreboard:** a real-time scoring and timer system in Vue and Vuetify, used in a real tournament.
- **RentHive (Startup Weekend Bohol 2024):** a peer-to-peer rental MVP; co-designed the flow and built the Tailwind UI for listing, login, cart and checkout. The team won 2nd place.

SKILLS, TOOLS & INFRASTRUCTURE

Operations & automation: n8n (primary), Make, Zapier, webhooks and REST APIs, approval workflows, monitoring, AI agents with human approval (Claude, OpenAI), RAG (Pinecone, Supabase)

Web & product: Next.js, React, Vue, TypeScript, Tailwind CSS, Vuetify, shadcn/ui, Supabase (Auth, RBAC, Postgres), Prisma, Cloudflare Workers and D1, Vite, ECharts, GridStack, Figma, Cypress, Playwright

Business tools: ClickUp, Slack, Asana, Monday.com, Notion, Airtable, Google Sheets and Apps Script, Typeform, PandaDoc, Shopify, Omnisend, Meta and Google Ads, Stripe, WordPress, Elementor, Wix

Video: long-form VSLs, short-form vertical ads, testimonials, motion graphics, logo animation, colour grading, sound design, brand systems for video, CapCut

Product & delivery: product ownership, sprint planning, backlog refinement, requirements, MVP scoping, release coordination, PR reviews, mentoring, handover guides

Infrastructure: self-hosted n8n on an Oracle Cloud Free Tier Linux VM (Cloudflare DNS, proxy and tunnel, custom webhook domain); SSH administration and webhook troubleshooting; Vercel, Render, Hostinger, Google Cloud Run, GitHub Actions (basic CI), SMTP, health monitoring and alerting; exposure to Docker

EDUCATION & EARLY EXPERIENCE

BS Computer Engineering, Bohol Island State University 2019 – 2023

Embedded systems, microcontrollers, Flutter, Dart, C and C++. Thesis: an IoT emergency messaging prototype for low-connectivity areas using NodeMCU ESP8266 and LoRa.

On-the-job training, Department of Education, Bohol · 240 hours

Computer, software and hardware support and clerical work in the Assistant Schools Division Superintendent's office. First place in a regional Best Practices presentation in Cebu.

CERTIFICATIONS

FinOps Certified Practitioner, FinOps Foundation · Vue Masterclass (Vue 2 and Vue 3), Vue School · Tailwind CSS Masterclass · Build Responsive Websites with HTML & CSS · Startup Weekend Bohol 2024, 2nd place
