SUMMARY

Builds the systems that run a business and edits the videos that sell it: client portals, scorecards, KPI dashboards, n8n automation and approval-first AI agents, plus on-brand VSLs, ads and testimonials. Open to client projects and full-time or contract roles in operations, automation, product and frontend.

EXPERIENCE

Ops & Automation Assistant, Penguin Ops · Remote — Aug 2026 – Present

- Built a talent management agency's client portal and KPI dashboard: one-tap decisions written back to the team's Google Sheets (10-minute Undo), PandaDoc and YouTube data; live since 2 October 2026.
- Rebuilt a performance ad agency's weekly scorecard from source data (Asana, Meta, Postgres) after restoring 130 lost verdicts; 93% parity with the old sheet (328 of 351 values), every difference explained.
- Built 14 n8n workflows for a Google Ads agency serving nearly 80 e-commerce clients: one Typeform submission runs a 38-node onboarding, and a Monday Slack pulse has Claude review each client's week.

Systems Implementation Associate, Stakra · Remote — Jun 2026 – Present

- Built MBOS, a governed AI media-buying system that cannot spend on its own (spend off by default, two people to release money): 79 contracts and 9,998 pipeline tests passing in simulation.
- Built Watchtower monitoring (19 connections), a salon operations app, and a car pre-vetting tool with a deterministic pricing engine and human approval (72 unit tests, 12 of 12 live checks).

Automation & Web Developer, Three-brand haircare retail group · Client — Oct 2026 – Present

- Audited 47 n8n workflows, wrote the go-live proposal, rebuilt the CEO dashboard and designed an approval-first Business OS where agents recommend and people approve; 4 of 16 agents in testing.

Video Editor & Motion Graphic Designer, Clipt · Client — Oct 2026 – Present

- 35-minute VSL in 4K for a mobile foot-care training company: on-brand panels timed to the founder's speech, full-screen statements, colour grading and sound design, plus a 68-second highlights reel.
- Four vertical ads and two nurse testimonials, all from one brand system and a repeatable recipe.

Web Designer and Developer, Flexiwork · Remote — Mar 2026 – Oct 2026

- 20+ client websites (WordPress, Elementor, Wix, Tailwind), recognised for consistent early delivery.

Lead Frontend Developer / Product Builder, Ardexa.ai · Remote — Oct 2025 – May 2026

- Primary frontend and full-stack developer in a team of four, building MVPs with the founders: RentWise (rental qualification and scoring), LexaDraft (contract templates) and TicketDesk (support triage).

Automation Engineer, Clix · Freelance, remote (company based in Israel) — Dec 2025 – Mar 2026

- Built n8n workflows for data processing and reporting, with validation, logging and error handling.

Junior Frontend Developer → Lead Frontend Developer → Product Owner, Alphaus — Jul 2023 – Dec 2025

- Lead Frontend Developer on Octo (cloud cost management for AWS, GCP and Azure): frontend architecture, PR reviews, Cypress tests and weekly releases in Vue and TypeScript; mentored engineers learning Vue.
- Built a Slack to ClickUp bug-reporting automation adopted company-wide and recognised by the CEO.
- Product Owner for Ripple: sprints, backlog, Figma UI/UX, the V2 migration and the Archera partnership.

SELECTED PROJECTS

AI job-matching pipeline (self-hosted n8n, rules before AI) · **AutoFit coaching** (AI drafts, coach approves) · **Bouquet Cipher** (bouquet-cipher.vercel.app) · **RentHive**, 2nd place, Startup Weekend Bohol 2024

SKILLS

Automation: n8n (self-hosted), Make, Zapier, webhooks, APIs, AI agents (Claude, OpenAI), RAG
Web & product: Next.js, React, Vue, TypeScript, Tailwind CSS, Supabase, Postgres, Figma, Cypress
Business tools: ClickUp, Slack, Asana, Monday.com, Notion, Airtable, Google Sheets, Shopify
Video: VSLs, short-form ads, testimonials, motion graphics, colour grading, sound design, CapCut
