Lord Kelvin Abellana

Bohol, Philippines
lordkelvinabellana@gmail.com | https://abellana-portfolio.vercel.app/ | https://github.com/lordkelvinabellana

Skills

Frontend Development
Vue, React, Vuetify, Tailwind CSS, TypeScript, JavaScript, HTML, CSS, Bootstrap

Automation & AI
n8n, OpenAI API, Workflow Automation, API Integrations, Webhooks, GoHighLevel

Data Visualization & UI Tools
ECharts, GridStack, Figma

Soft Skills
Problem Solving, Analytical Thinking, Communication, Independent Learning, System Design Thinking, Workflow Optimization

Dev Tools & Platforms
Git, Vercel, Cloudflare, SSH, ngrok, Tunneling, Hostinger

Other Technologies
Flutter, Dart, Supabase, WIx, Wordpress

Professional Experience

Alphaus (Octo,Ripple & Flow)

Remote

Product Owner / Frontend Developer

Aug 2023 – Dec 2025

Octo — Lead Frontend Developer

• Led frontend development for the Octo platform, managing the frontend codebase, reviewing pull requests, and coordinating releases to maintain code quality and product stability.

• Built interactive cloud cost dashboards using Vue, GridStack, and ECharts, enabling users to visualize infrastructure spending and identify cost optimization opportunities.

• Translated Figma designs into production-ready UI components, ensuring consistent design implementation and responsive interfaces across the platform.

• Developed reusable frontend components and data visualization tools that improved dashboard flexibility and reporting capabilities.

Ripple — Product Owner

• Led product development for Ripple, a cloud cost management solution focused on financial visibility and optimization.

• Defined product requirements, created feature specifications, and prioritized the development roadmap based on user needs and business goals.

• Designed SaaS product workflows and user flows in Figma, translating product requirements into clear interface structures for engineering implementation.

• Coordinated between engineering, design, and stakeholders to ensure features were delivered on schedule and aligned with product strategy.

• Gathered feedback from internal teams and early users to refine features and improve the overall product experience.

Flow — Product Development & Partnerships

• Contributed to the development of Flow, a platform focused on improving cloud cost optimization workflows.

• Helped establish a partnership with Archera, integrating their savings and commitment solutions into the product ecosystem.

• Supported the integration of external services and tools that enhanced cost optimization capabilities for users.

• Worked with product and engineering teams to identify opportunities for improving financial efficiency through automation and partner integrations.

Freelance Developer — Remote

Web Development & Automation Work — 2023 – Present

Selected projects listed below. Additional work available in portfolio (.https://abellana-portfolio.vercel.app/)

Web Projects

RentWise — Property Management Platform — https://cocoon-tau.vercel.app/

• Developed frontend interfaces for a rental management platform, building responsive components that allow property owners to manage listings and tenant information.

• Implemented UI features that improved usability and streamlined property management workflows.

TicketDesk — Support & Ticket Management System — https://cocoon-tau.vercel.app/

• Built frontend interfaces for a ticket management system used to organize and track support requests.

• Implemented UI components that improved ticket visibility and helped teams manage issue resolution more efficiently.

Automation Projects

AI Weekly Client Reporting Automation

• Built an automation that collects weekly client performance data and generates AI-powered reports using LLM analysis.

• Implemented approval workflows before sending generated messages, ensuring accuracy while enabling scalable client communication.

Zoom Recording Processing Pipeline

• Built an automation that retrieves Zoom recordings through API integrations and uploads them automatically to YouTube.

• Implemented JavaScript processing inside n8n to handle API pagination and metadata transformation.

• Eliminated repetitive manual publishing tasks while maintaining centralized tracking through Google Sheets.

AI Document / Receipt Parsing Workflow

• Developed a workflow that extracts structured financial data from uploaded receipts using AI document parsing services.

• Automated capture of store names, totals, and transaction details, reducing manual data entry.

Education

Bohol Island State University - Main Campus
Bachelor of Science in Computer Engineering
2023

Relevant Coursework:
Web Development, Programming, Software Engineering, Automation Builder

Certifications

FinOps Certified Practitioner — Credly
Vue Masterclass (Vue 2 & Vue 3)
Tailwind CSS Masterclass
Build Responsive Websites with HTML & CSS
